

GENERLINK

DON'T BE LEFT IN THE DARK!

GenerLink™ provides co-op members a safe and easy way to connect their portable generator during outages. Appliances wired through your home's breaker panel, such as a furnace, hot water heater and many lights cannot run using extension cords.

GenerLink™ provides the flexibility to run these loads from your portable generator. Your well pump, water heater, sump pump, and refrigerator are just some of the appliances you can operate with GenerLink™.

SAFE

- Eliminates the use of extension cords and other connections that can be hazardous to members and line workers.
- Prevents dangerous back feeding onto the utility line.

EASY

- Installed in less than 30 minutes by BEC's technicians.
- Installed behind the meter and requires no rewiring of the member's electrical system.

Not all generators are compatible with a GenerLink™ transfer switch due to plug type, wattage, voltage and/or GFCI. If you need assistance with generator verification, contact Beltrami Electric Cooperative or visit GenerLink.com to view a list of compatible generators.

Required generator receptacles:

L14-20
Locking

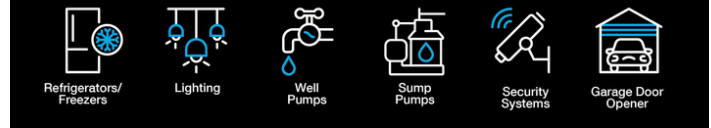

L14-30
